

# Efficient, multi-functional and cost effective banding of labels

Damage free bundling of labels

TRL24-30 with label in-feed conveyor

## Bandall TR-Label Banding

Brilliant and robust design. That's what characterises Bandall's banding systems. These high quality products, of Dutch manufacture, are *the* innovation in banding and bundling.

Complete strips of sheet cut stacks can be placed onto the low friction conveyor by the guillotine operator. The TR-Label unit will automatically separate, jog and band the stacks. Double or triple banding is possible, with the use of state of the art Servo technique.

The Bandall TR-Label Series bands...

- **with increased efficiency**, the in-feed conveyor table can be connected to the guillotine table;
- **rapidly and reliably**, thanks to the patented band transport system;
- **economically and environmentally friendly**, through reduced use of material - extremely thin paper or film;
- **without damage**, band tension can be adjusted with precision, achieving stable packaging;
- **cleanly, odour and smoke free**, due to the 'Ultra Clean Seal' system;
- **with low energy costs**, and minimal maintenance.

### Customised configurations

Machines in the TR-Label Bandall Series are available in a wide range of channel sizes suitable for 28, 48, 75 and 100 mm bands.
